

services.

I specialise in creating 3d visuals for design, architecture and advertising.
The images I produce serve not only as presentation tools but also help to enhance the design process.

The use of 3d visuals allows greater freedom when developing ideas and design concepts and also speeds up the process of finding solutions to design issues. This means savings in time and cost regardless of the nature of the project or the scale of it.

The services that I provide are a combination of my industrial design training and my skill and experience in design visualisation.

Design services.

- Design research
- Material research
- Concept sketching
- Concept development
- Production of 2d/3d layout drawings

Visualisation services.

- 3d modeling of concepts / from sketches or simply an idea.
- Rendering / photoquality or conceptual images
- Conversion and cleanup of CAD data / IGES and solid modeling formats.
- Photography and image retouching / integration of renders with site or studio background.
- Composite imaging and image stitching / for creation of extremely detailed images (100 megapixel+)

Apart from the services listed above I am also available to undertake design work.
The design work I undertake is often of a bespoke or conceptual nature.
It can cover anything from furniture to environmental design, from the concepts for an entire building development to a single bespoke iron staircase.

The design section of the website will feature a number of these projects in the coming months.
